

AI-Powered Solutions for Safer, Smarter, and More Efficient Healthcare

An intelligent chemotherapy drug compounding system. Automated compounding is utilized to enhance the safety and efficiency of chemotherapy drug preparation.

Surgical training is an apprenticeship. Without a teacher, how can trainees improve? Using vascular models and a patented AI device, doctors can practice alone to stay sharp. The AI scores their work, ensuring high training efficiency.

Real-time IDH prediction & VA dysfunction alerts, powered by dual AI: predictive AI for risk surveillance, GenAI for personalized care, medication adjustment, and patient education. IDH and PTA rates have decreased, with satisfaction exceeding 90%.

An AI dashboard predicting successful ventilator weaning within 24 hours, helping clinicians identify optimal extubation timing. It improves efficiency, reduces resource use, eases patient discomfort, is FDA-certified, and has been transferred to Compal Electronics.

At Chi Mei Medical Center, one patient, one platform, every specialist united. Doctors, nurses, pharmacists, dietitians, and educators are all AI-enabled, collaborating in smarter ward rounds. Taiwan's blueprint for next-gen hospital care.
